Abstract

The purpose of the abstract is to summarise the contents of your paper. As such, the abstract represents the second highest level of abstraction of your paper. It should not be a perfect copy of the first paragraph of your introduction, nor should it replicate other parts of your paper word for word. The abstract, like the title, is a mini-paper, and its purpose is to inform the reader, in about 200 to 300 words, about the whole paper. This usually means that the abstract should be written from scratch, once the rest of the paper is completed. The shorter it is, the better. Most abstracts occupy a single paragraph. Your abstract should lay claim to some new results, unless your paper is a survey. However, do not make claims that are not justified by the content of the paper. Try to avoid starting your abstract with the common but unnecessary phrases "This paper", or "In this paper".

Keywords: 6 to 10 keywords. Try to anticipate the words that a reader might search for.

1 Introduction

and so on until your conclusions
